Pick-Up Vertical Turning Machines
Pick-up Turning Machines
A guarantee of maximum productivity and quality in modern production. More than 20 years of experience in the development and production of pick-up style vertical turning machines combined with continuous further development help you to master the process requirements of today. The consistent focus on technological solutions has given rise to an enormous pool of knowledge and experience – from which you, too can benefit.

The series is divided into three basic models

- **DVH – the classic single spindle pick-up model**
  An ideal combination of price and performance coupled with optimum manufacturing solutions

- **DVH DUO – the highly productive dual spindle model**
  Dual spindle pick-up vertical turning machine for use in highly productive manufacturing

- **DVH 4X – the highly productive single spindle model**
  Self-loading 4-axis vertical turning machine for the optimum accomplishment of machining operations, offering high potential savings of up to 45% compared with conventional 2-axis machining

**Advantages**

**The Pick-up Principle**

- Integrated automatic loading/unloading
- Low cost per piece through high productivity
- Multiple machine operation as the machine is decoupled from the operator

**Components and Options**

- Reliable, tried-and-tested components
- Numerous options for your individual DVH
- Highly versatile
- Rapid installation and production start-up

**Expansions to the Basic Version**

- X- and Y-axes for drilling operations
- Additional 4-axis cross slide (improves efficiency by up to 45%)

**Excellent Ergonomics**

- Easily accessible, generous work area
- Ideal setup conditions, ensuring extremely short unproductive downtimes
- Large window for monitoring the manufacturing process

**Flexible Handling Systems**

- Low-cost standard handling systems
- Flexible handling solutions adapted to the production flow
- Extremely diverse range of options (robot loading, connection to gantry loaders, batch hoppers, etc.)
Functional Design – Transfer Technology

**DVH Standard configuration**
1. Automatic workpiece loading and unloading with hydraulic lift unit and run-over protection
2. Travelling motor spindle
3. Turret
4. Ball screw drive
5. Tray-type enclosure
6. Hydraulic counter balancing
7. Linear measuring system in all axes

**DVH with auxiliary units from the modular machine kit**

**DVH Auxiliary components**
8. Y-axis
9. Linear drive
10. Linear guides with integrated measuring systems
11. Technology modules for grinding, NC-slide, drilling, milling

DVH Pick-up vertical turning machine
Modular System

Motor spindle
- max. 42 kW (40 % duty)
- max. 5000 rpm

Motor spindle
- max. 71 kW (40 % duty)
- max. 4000 rpm

Motor spindle
- max. 80 kW (40 % duty)
- max. 4000 rpm

Drilling/milling unit
- 100 Nm / 3000 rpm
- B-axis*

Multiple drill head

Tool holder with NC lift-off slide

Crown turret

Turret with live tools
- 100 Nm / 4000 rpm
- 250 mm tool length

Multifunction plate

NC lift-off slide
- Stroke max. 40 mm
- For holding static tools
- Workpieces up to Ø 500 mm

Workpiece gauge

Grinding/milling unit
- Working stroke max. 80 mm
- Speed max. 3000 rpm

Oval conveyor belt drag conveyor

Inverted-tooth chain driven conveyor

Flat chain driven conveyor
Standard Options

Crown Turret
- For complex drilling tasks
- Sturdy design
- Short indexing times
- 6 tool holders
- Use of driven tools

Technical Data – Crown Turret

Swiveling Turret (B-axis)
- Swiveling range 0 – 45°
- Programmable angle adjustment
- 12 tool stations
- No driven angle tools required

Drilling Turret
- Rigid design
- Short indexing times
- 12 tool stations
- Use of driven tools

Technical Data – Drilling Turret

<table>

</table>

Swiveling Turret (B-axis)
- Swiveling range 0 – 45°
- Programmable angle adjustment
- 12 tool stations
- No driven angle tools required

Multiple drill head
- Reduced cycle times
- Available as separate units
- Available as add-on for turrets

Highly Dynamic Motor Spindles
- High speeds
- High motor power
- Liquid-cooled, ensuring high thermal stability and low noise
- High-precision positioning through integrated C-axis
- Integrated clamping stroke monitoring / maintenance-free

CNC controls
- Siemens
- Fanuc
Driven Tools
Turning, drilling, milling and tapping in a single chucking offers the best machining quality. No setup is needed between operations and the number of fixtures required is reduced.

Workpiece Gauge
When gauging takes place in the machine, the motor spindle and the workpiece contact a measuring probe during a measuring cycle. Gauging outside the machine has the advantage of taking place during the machining time.

A Choice of Two Systems
- Gauges with workpiece-specific parts such as snap gauges and measuring heads
- CNC gauging machine with freely programmable measuring cycles

Tool Gauge
By using our own special designed software, the operator is able to gauge new tools with maximum precision and automatically correct them in the tool magazine.

Tool Breakage and Wear Monitoring
To increase the uptime of the DVH, the machines can be equipped with a tool edge and collision monitoring system. In the event of tool breakage, wear or collision, an emergency shutdown module brings the feed axes to an immediate halt.

Grinding
Grinding process with integrated automatic dressing and special grinding cycles. Grinding wheels of corundum, CBN and other materials are used. Special grinding devices are available for producing the parallel keys of gears.
DVH 200 / 300

- For workpieces with a swing diameter of up to 200 / 300 mm
- Despite the compact design, all machine units – such as the spindle, chuck and tool turret – can be easily reached for setup work
- The multifunction plate offers space for various machining modules, e.g. drilling, milling and grinding, as a further option to the tool turret
- Electric turret drive for minimal thermal effects
- Machine bed available as mineral casting

Performance and flexibility features:
- Powerful motor spindle
- High axis speeds
- Wide range of configuration options from existing modular system
- Y-axis for complete machining
- Various chip conveyors, coolant systems (high pressure) and filtering methods
- Large selection of different tools and tool carrier systems
- Customized workpiece feed and removal

DVH 400 / DVH 500

- For workpieces with a swing diameter of up to 510 mm
- Superior cutting performance and outstanding ergonomics coupled with ideal use of the installation space
- Extremely diverse range of options for optimum process organization
- Integration of additional tool carriers, grinding spindles, milling spindles and multiple drill heads

Performance and flexibility features:
- Powerful motor spindles achieving up to 80 kW set standards in this class
- High axis speeds
- Wide range of configuration options from proven modular system
- Y-axis for complete machining
- Various chip conveyors, coolant systems (high pressure) and filtering methods
- Large selection of different tools and tool carrier systems
- Customized workpiece feed and removal
- Modular tooling systems suitable for high pressure cooling up to 80 bar
- Tooling for NC lift-off operations

**Turn-grinding**
The surfaces of the brake are simultaneously ground on both sides with a rotating workpiece and a rotating tool in a single machining operation.

**Turn-milling**
Twin milling unit with milling spindles in opposing directions, for machining brake surfaces on the DVH 500.
DVH 630 / DVH 750

For workpieces with a swing diameter of up to 630/750/900 mm

Superior cutting performance and outstanding ergonomics coupled with ideal use of the installation space

Very diverse range of options for optimum process organization

Integration of additional tool carriers, grinding spindles, milling spindles and multiple drill heads

Performance and flexibility features:

- Powerful motor spindles for use in heavy cutting with a torque of up to 3000 Nm
- Workpiece weight of up to 300 kg
- Rigid machine construction for holding workpiece and chuck weights
- Y-axis for complete machining
- Broad range of configuration options from existing modular system
- Variable chip conveyors, coolant systems (high pressure) and filtering methods
- Large selection of different tools and tool carrier systems
- Customization of workpiece feed and removal
- Modular tooling systems suitable for high pressure cooling up to 80 bar

Handling Systems
The Hessapp portfolio includes low-cost standard solutions or, as an alternative, customized versions adapted to the task at hand.

Ultra-flexible Standard Handling Systems
The oval conveyor system comes is equipped with workpiece frames adapted to the workpiece diameter, for default positioning in the frame. Setup is easy with no mechanical work, as the diameter is simply entered in the machine control system. If workpiece positioning is required, the user can easily produce a guide himself and insert it in the existing workpiece frame.

Customized Solution
Special customized solutions are designed based on the user’s requirements in terms of components, space conditions, and linking with other machines. Complete automated handling systems with logistics software are also possible. Connection to palletizers for highly productive manufacturing systems is available for medium to large-scale batch production.

Closed-loop Recirculating Pallet Conveyor for Workpiece Frames
The workpieces are moved by easily replaceable workpiece frames.

**DVH 200: Three Frame Sizes**
- ø 50–80 mm: 32 frames
- ø 80–130 mm: 22 frames
- ø 130–200 mm: 16 frames

**DVH 400 / 500: Three Frame Sizes**
- ø 150–250 mm: 20 frames
- ø 250–350 mm: 15 frames
- ø 350–450 mm: 12 frames

Machine condition monitoring “Finger print” via vibration analysis, ballbar test and trace measurement.
FFG Werke GmbH offers a broad range of turning, milling, and gear manufacturing technology, based on the knowhow of the renowned machine tool brands VDF Boehringer, Hüller Hille, Hessapp, Honsberg, Modul and Witzig & Frank. These brands are well known as reliable and innovative equipment suppliers for the automotive and truck, machine building, general machining, railway, aerospace, energy and heavy engineering industries. The company has a global footprint, which is enhanced by a network of strong sales & service partners. While being an independent group member, FFG Werke GmbH benefits from the strengths and opportunities of the global Fair Friend Group. The brand FFG Europe stands for premium technology within FFG. Apart from the German brands, it comprises the Italian manufacturers Jobs, Sachman, Rambaudi and Sigma.
